Clogs/Wooden Shoe

The FootPro™ Wooden Shoes are typically used in treatment of chronic and sometimes acute laminitis cases. They are priced by the each, but packed and sold in 2 pair boxes, with each pair individually bagged. Screws are provided. This is a complementary product for the Hoofcast, as most wooden shoes or clog applications are done with a cast material to secure the shoe. EDSS Clogs:Â The Steward Clog is the ultimate Multi-Directional Leverage Reduction Shoe available today. In cooperation with the original designer of the wooden shoe, Dr. Mike Steward, EDSS has used this concept to develop a highly adjustable, user-friendly composite version. The Clog is most widely used for treating chronic laminitis and founder cases because it offers excellent stability & protection to the distal phalanx, while at the same time reduces the leverage forces on the affected laminae so the horse can stay comfortably mobile.

Steel Triumph Unclipped

The Triumph steel series is considered the premier shoe for a variety of disciplines, including event horses, cross-country and various rodeo applications. To increase strength and wear, Kerckhaert has added additional thickness in shoe sizes 0 through 3, clipped and unclipped, in the Steel Triumph series. This change is especially beneficial if you use clipped shoes on event horses with larger feet. Combine this enhancement with the V-crease design and sole relief in Kerckhaert shoes and you have an exceptional shoe. Shoes are symmetrical. Punched for 5 City or 5 Slim.

Steel Triumph Lite Unclipped

This series is designed specifically for the Quarter Horse and other breeds that don't require heavy steel for good performance. The front shape is slightly narrower than the regular Triumph series and makes fitting of the shoe much easier. With the lighter section of steel, this series has quickly become a favorite of performance horses in the ring and out. Boxed heels and sole relief. Shoes are symmetrical. Punched for 4-1/2 Regular, 5 Race, 5 City or 5 Slim, depending on size.

Diamond Pony

The Diamond Pony is a smaller version of the Classic Plain that is ¼" thick. Forged from special steel (like the regular horseshoe) the Diamond Pony shoe offers extended wear. Six properly spaced nail holes fit the average pony hoof. Shoes are symmetrical. Punched for 4.5 Race nails. Note: For No. 2 Pony shoe, use Diamond 000 Bronco.

Diamond Pony 0	5045	$5.90
Diamond Pony 1	5046	$5.90

Kerckhaert Standard Pony

The Standard Pony shoes have a very nice shape for ponies and even fit some miniatures. Shoes are symmetrical. Punched for 3-1/2 Race, 4-1/2 Race or 4-1/2 slim.

Kerckhaert Pride Fine Sliding Plates

The Pride Fine series of sliding plates offers a choice for the farrier that prefers a finer punching pattern. The series is available in a 1/4" x 1" stock size, with a very slight taper in the heel area. The nail pattern works best for a shoe fit that is very close to a perimeter fit, where the shoe is not set forward. Shoes are symmetrical. Punched precisely for 4-1/2 Race, 4-1/2 Race XS, 4-1/2 Slim or 5 Special and require little filing to reduce the head of the nail.

Race

Nails with the Race designation are used most often on Thoroughbred, Quarter Horse or Standardbred race horses that wear light steel or aluminum shoes. These horses are often shod on 3 or 4 week intervals and the small shank of the nail creates less damage to the hoof. Small size shoes used for ponies, yearlings and smaller breeds also may be punched for race nails. Benefits: â€¢ Consistency â€¢ Far fewer unusable nails â€¢ Finish and points enable smooth driving â€¢ Material is optimum for clinch

E-Head

E-Slim are European style nails. These fit well in shoes like the Kerckhaert DF and SSP series that were made first for the European market. Used most often in the Hunter and Jumper discipline. Some farriers prefer to punch their hand made shoes for E-heads because of the symmetrical nature of the nail. There is also a feeling that an E-head nail has more strength because the shank comes out of the center of the head, with slightly more mass. Benefits: â€¢ Material is optimum for clinching â€¢ Far fewer unusable nails â€¢ Consistency â€¢ Finish and points enable smooth driving

Combo

Combo nails are a modification of the City or Slim nail. The heads are slightly larger but yet the shank is still similar to the City or Slim. They are often used for resetting when nail holes have enlarged or with shoes that have a wide crease. Benefits: â€¢ Material is optimum for clinching â€¢ Far fewer unusable nails â€¢ Consistency â€¢ Finish and points enable smooth driving

LX

The LX style nails are a hybrid head design that is similar to the E head but is more rectangular. Often used in rim or concave style shoes but they are used in European style flat shoes as well. Benefits include: â€¢ Material is optimum for clinching â€¢ Far fewer unusable nails â€¢ Consistency â€¢ Finish and points enable smooth driving

Leg Saver F/H

The LEG SAVER bonded rim pad is made of tough, but resilient rubber which is vulcanized onto the fronts only. LEG SAVERS will help in the reduction of sole bruising. The Â QUARTER HORSE BLOCK HINDÂ has "blocks"• in the heels that resemble cleats. The toe grab on this shoe rises .305"³ (7.75mm) above the surface of the shoe and is very effective on deep and sandy tracks to grab loads of traction.

Clogs/Wooden Shoes

The FootPro™ Wooden Shoes are typically used in treatment of chronic and sometimes acute laminitis cases. They are priced by the each, but packed and sold in 2 pair boxes, with each pair individually bagged. Screws are provided. This is a complementary product for the Hoofcast, as most wooden shoes or clog applications are done with a cast material to secure the shoe. EDSS Clogs:Â The Steward Clog is the ultimate Multi-Directional Leverage Reduction Shoe available today. In cooperation with the original designer of the wooden shoe, Dr. Mike Steward, EDSS has used this concept to develop a highly adjustable, user-friendly composite version. The Clog is most widely used for treating chronic laminitis and founder cases because it offers excellent stability & protection to the distal phalanx, while at the same time reduces the leverage forces on the affected laminae so the horse can stay comfortably mobile.

Avanti PLR

The AVANTI Steel PLR horseshoes are designed to the fit the foot in a balanced fashion around the widest part of the foot (which is essentially the center of rotation of the coffin joint). In addition to balancing the shoe around the coffin bone, the AVANTI shoe incorporates an optimized leverage reduction design that will help reduce excessive strain and forces on many of the tendon, ligament, and soft tissue structures in & around the coffin joint. Modeled after the very popular Aluminum PLR Shoes, the AVANTI brings many of those same performance and treatment benefits in a durable steel version.

Bronco Tracker

Diamond Tracker - Kerckhaert continues to make innovative changes to the Diamond brand with the new Diamond Tracker horseshoe. This shoe is available in an unclipped generic pattern; easily shaped into front or hind patterns. This allows you to reduce the amount of shoes you need on your truck. With a beveled toe and a solid heel area these shoes provide great breakover with less chance of slipping and additional support in soft terrain. Use the Diamond Tracker with Liberty and Liberty Cu Horseshoe Nails with Copper Shield Technology in sizes 5 City, 5 Slim or 5 Combo for outstanding results.

380 German Sport Shoe

The GERMAN SPORT SHOE is specially designed for Hanoverians and Holstein horses and is also easier to set on feet similar to German Warmbloods', whilst its cross-section (with rolling and bevelling) provides a good grip in soft ground. Thanks to a chased inner rim from quarter to heel and wide-webbed, beveled heels, it affords better protection and good penetration in soft footing. The rolling from quarter to quarter reduces the deep digital flexor tendon's work and minimizes the collateral ligaments' efforts in circling and turning.

ACR 380 German Sport Shoe 0	7106	$69.95
ACR 380 German Sport Shoe 1	7107	$69.95
ACR 380 German Sport Shoe 2	7108	$69.95
ACR 380 German Sport Shoe 3	7109	$69.95
ACR 380 German Sport Shoe 4	7110	$69.95

340 Sport + Shoe

THE ACR SPORT + SHOE is a multidisciplinary sport shoe. The chased branches and beveled heels facilitate penetration in the ground and anticipate and limit stress on the suspensory apparatus (osseous muscle or superficial digital flexor tendon tendinitis). Anterior rolling motion reduces forces on the deep digital flexor tendon and relieves the distal collateral ligaments. The ACR Sport + 340 - 12 mm is available in 0,1, 2, 3, 4, 5. For the others sizes, please refer to the ACR Sport + 340 - 10 mm.

ACR 340 Sport + Shoe 0	7117	$74.62
ACR 340 Sport + Shoe 1	7118	$74.62
ACR 340 Sport + Shoe 2	7119	$74.62
ACR 340 Sport + Shoe 3	7120	$74.62

200 Onion Shoe

The ACR Onion shoe protects sensitive heels, increases the contact area for the rear part of the foot and limits the heel's sinking into soft ground. Its rolling toe facilitates breakover, spares the deep digital flexor tendon, and gives relief in the case of a podotrochlear syndrome.It is also ideal for the horses with a moderate navicular disorder that takes part in competitions (3 day events) and for horses not suited to the Egg Bar Shoe. It may be indicated for horses with navicular disorders exhibiting a lesion on the sesamoid bone or a sesamoidean ligament desmopathy. The ACR Onion Shoe 200-10 mm is available in 3x0, 2x0, 0 and 1. For the others sizes, refer to the ACR Onion Shoe 200 - 12 mm.

320 Rolling Sport Shoe

The ACR ROLLING SPORT SHOE is ideal for sport horses that work on firm ground. Its shape increases adherence, its rolling toe facilitates breakover, and it reduces anterior lever arm (relieving the deep digital flexor tendon) and helps the heels to sink into the ground (to protect against fetlock suspensory apparatus and superficial digital flexor tendon problems).

Ortho Kit

June 2013 saw the launch of a comprehensive scientific study on the subject of shoeing, funded by the Werkman Horseshoes company and led by Dr. Jenny Hagen (Veterinary-Anatomical Institute (Veterinär-Anatomisches Institut) of Leipzig University). The study focused on the impact of various horseshoes and shoeing modifications, taking into account diverse soil types, on • the distribution pattern of the vertical compressive forces exerted on the hoof • the size of the load-bearing area • the foot roll and the gait • the orientation of the phalanges The results of this study were used for the development of the Werkman Ortho-Kit. The Werkman Ortho-Kit provides you with an effective and straightforward means to turn Werkman horseshoes into various therapeutic shoes.
